Expression of this cDNA in transgenic tobacco callus resulted in prodn. of petroselenic acid (18:1 omega 12) and omega-12

The present invention describes a recombinant DNA construct comprising a DNA sequence encoding a plant Delta-9 desaturase protein. The present invention also provides a method of modifying fatty acid composition in a host plant cell from a given fatty acid saturation to a different fatty acid saturation, comprising growing a host plant cell containing a recombinant DNA sequence which encodes a plant desaturase under the control of regulatory elements functional in the plant cell during lipid accumulation. Also, oilseeds having a modified level of fatty acid saturation and oils produced from such oilseeds.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           XXX DE
                                                                 The invention relates to a new mutant castor Delta9-18:0-acyl carrier protein (ACP) desaturase that has one or more amino acid substitutions selected from: (a) Ala for Met at residue 114; (b) Arg for Thr at residue 117; (c) Gly for Leu at residue 118; (d) Val for Pro at regidue 179; (e) Val for Thr at residue 181; (f) Leu for Gly at residue 188; and (g) Phe for Thr at residue 181. The mutant castor Delta9-18:0-ACP desaturase is useful in producing commercially useful products, such as vegetable oils rich in monounsaturated fatty acids. Such vegetable oils are important in human nutrition and can be used as renewable sources of industrial chemicals. A method for specifically altering a function of a protein through directed mutagenesis is also provided. The method can be used altering enzymatic functions, binding functions or structural functions of a protein the desaturation of a protein call the castor desaturation.
                                          of the castor desaturase enzyme. The method is also useful for manipulating the physical properties and commercial uses of conventional

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             chimeric genes which are used in (antisense orientation) to transform plant cells. The nucleic acids are useful for controlling the levels of (un)saturated fatty acids in soybean oll. In transformed cells (seeds), the chimeric genes transcribe the antisense RNA to the complementary mRNA for the enzyme. This results in inhibition of expression of the endogenous enzyme and reduction in desaturation of seed oil. This results in seed oil which is low in saturates and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                cell having integrated into its genome a recombinant DNA sequence encoding this protein, under the control of regulatory elements functional in the plant cell during lipid accumulation, under conditions which will promote the activity of the regulatory elements. By increasing the amt. of desaturase available in plant cells, an increased percentage of unsatd fatty acids may be provided, using anti-sense technology, the amt. of desaturase can be decreased, resulting in a higher percentage of fatty acids. Using the desaturase gene and derivs. in cells and plants, desirable traits such as chill tolerance may be introduced and environmentally safe herbicide prods. may be provided.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               14-NOV-1990;

                                                                                                                                                                                                                                                 The protein sequence was deduced from the desaturase gene isolate from Carthamus tinctorius as the clone pCGN2754. The clone can bused to construct acyl carrier protein expression cassettes in a binary vector for plant transformation. This allows integration of nucleic acids encoding a desaturase sequence and a synthase sequence into the genome of a host cell. A plant desaturase includes any enzyme capable of catalysing the insertion of a first double bond into a fatty acid-ACP moiety especially between C9-C1 See also AAR22046-53.

                                                                          constructs containing anti-sense synthase sequences. The constructs allow the generation of plants bearing seeds which have enhanced of yields and/or altered compositions of oils. The production of common plant unsaturated fatty acids is catalysed by a desaturase. Oleic, linoleic and alpha-linoleic acids found in storage triglycerides are produced from the desaturation of stearoyl-ACP to
                                                                                                                                             Higher plants appear to share a common metabolic pathway for the synthesis of fatty acids. Genes encoding synthase proteins may be used in nucleic acid constructs to modulate the amount of synthase activity in a host cell. Nucleic acid constructs may also be designed to decrease the expression of a synthase protein, i.e.,

The present invention describes a recombinant DNA construct comprising a DNA sequence encoding a plant Delta-9 desaturase protein. The present invention also provides a method of modifying fatty acid composition in a host plant cell from a given fatty acid saturation to a different fatty acid saturation, comprising growing a host plant cell containing a recombinant DNA sequence which encodes a plant desaturate under the control of regulatory elements functional in the plant cell during lipid accumulation. Also, oilseeds having a modified level of fatty acid saturation and oils produced from such oilseeds.
                                                                                                                                                                             Glycine

It catalyses the conversion of stearoyl-ACP to oleoyl-ACP. Expression of the mature enzyme in transgenic plants such as soybean, rapeseed, sunflower, cocoa, peanut, sunflower and corn, allows the fatty acid composition, esp. the stearic acid content, of the seed oil fatty acid composition, esp. the stearic acid content, of the seed oil

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  (AAW14798) each catalyse the desaturation of stearcy1-ACP (C18:0) to oleoy1-ACP (C18:1). Their amino acid sequences were deduced from cDNA clones (AAT63437-38) isolated from a Brassica napus cv. 212/86 mid-mturation seed cDNA library. An antisense gene was constructed to generate antisense RNA homologous to both BND9 and BND11. In transgenic Brassica plants expressing the stearcy1-ACP desaturase antisense construct and mangosteen Class I acy1-ACP thioesterase GarmfatA1 (see also AAW14795), levels of C18:0 in the seed oil may exceed 50% of total fatty acids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Increasing levels of using a DNA sequence substantial activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  WPI;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         233
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            173
                                        construct comprising a DNA sequence encoding a plant Delta-9 desaturase protein. The present invention also provides a method of modifying fatty acid composition in a host plant cell from a given fatty acid saturation to a different fatty acid saturation, comprising growing a host plant cell containing a recombinant DNA sequence which encodes a plant desaturase under the control of regulatory elements functional in the plant cell during lipid accumulation. Also, oilseeds having a modified level of fatty acid saturation and oils produced from such oilseeds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       06-JUN-1995;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        293
